The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a secretion signal sequence tryptase with an active site mutation (the construct drives expression of a mature proteclytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The active site mutants of proteclytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, compounds which act as tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, all active.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

tripe site mutants of traces tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a Secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic comprising a mature proteolytic tryptase that lacks enzymatic activity due to the a critic site mutanion, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The critic site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, anteagonists, agonists, etc. AAU12009-AAU12024 represent recombinant human beta-II tryptase active

The present invention relates to recombinant manam procession control of these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic cryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the cative site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatic activity, and for modelling studies. The enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 REQHLYYQDQLLPVSRIIVHPQFYTAQIGADIALLELEEPVNVSSHVHTVTLPPASETFP 120

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the procease and its encommant of the structural and for modelling studies. The enzymatically-active, compounds which act as tryptase and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, compounds which act as tryptase inhibitors, antagonists, agonists, the present sequence represents recombinant human mature beta-II tryptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            REQHLYYQDQLLPVSRIIVHPQFYTAQIGADIALLELEEPVKVSSHVHTVTLPPASETFP 124

This is the deduced amino acid sequence of human mast cell tryptase compositions comprising an isolated tryptase-7 that may include chimeric proteins that contain (a) a human tryptase for all but the active site region and (b) the substrate-binding pocket of mouse tryptase-7 or its homologues (see human active that codes for a blood clot by administering a nucleic acid molecule that codes for a tryptase-7, or an expression product, to decrease fibrinogen activity; a nucleic acid encoding a product, to decrease fibrinogen activity; a nucleic acid encoding a serine protease (SP); and a method of producing a mature SP by expressing the inactive zymogen in a host cell, and cleaving the enterokinase susceptibility domain. The tryptase-7 polypeptides can be used to treat disorders mediated by undestrable thrombus clot formation such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      myocardial infarction and reocclusion following angioplasty of blood clots associated with pulmonary thromboembolism, deep vein thrombosis, cerebral embolism, renal vein and peripheral arterial thrombosis. They are also useful for all surgical procedures that require decreased blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New compositions containing tryptase-7, e.g. mouse mast cell protease-7 are used to treat clot formation in e.g. myocardial infarction, reocclusion following angioplasty or pulmonary thrombo-embolism.
                                                                                                                                                                                                                          Mast cell tryptase II/beta; human; MCP-7; mast cell protease 7; blood clot; anticoagulant; myocardial infarction; reocclusion; thromboembolism; cerebral embolism; thrombosis; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 66-67; 92pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
